REACH – standards for
the handling of chemicals.

Consistent implementation – for
protecting people and the environment

REACH standards provide regulations for the handling of chemicals in Europe

Protecting people and the environment should be our top priority. REACH is the European chemicals law providing rules for handling chemicals. Klüber Lubrication brings these standards to life every day. For all of us. For our environment.

REACH (EU Regulation 1907/2006) is Europe's regulation for the **R**egistration, **E**valuation and **A**uthorisation of **C**hemicals and has been in force since 2007. Manufacturers and importers are under obligation to collect comprehensive data on the substances they sell, evaluate potential environmental and health risks, and inform users on necessary safety measures in a comprehensive Safety Data Sheet (SDS).

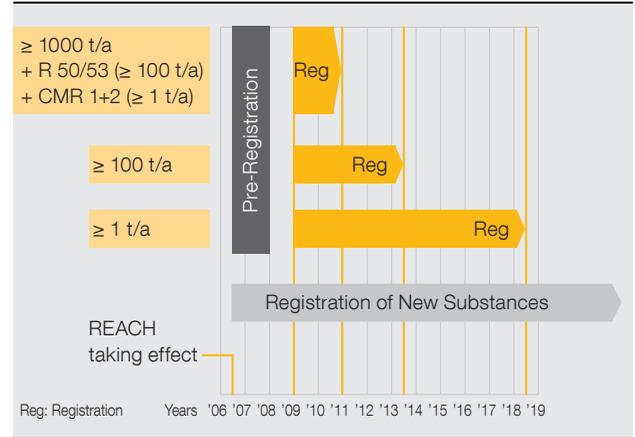

REACH also defines the basic conditions for how speciality lubricants should be handled.

REACH registration deadlines

No data, no market: according to this principle only preregistered and registered substances can be manufactured, imported and used in Europe. For substances exceeding an import or production quantity of 100 tonnes per year, the registration deadlines have already expired. All these chemical substances have already been registered. The deadline for substances produced from 1 to 100 tonnes per year is 2018.

REACH registration deadlines

Klüber Lubrication is in close contact with the manufacturers and importers of our raw materials so that information on changes is always readily available to ensure the availability and consistently high quality of our speciality lubricants.

We have made these REACH standards and their consistent implementation in our everyday activities one of the benchmarks of acting responsibly.

Safety Data Sheets acc. to CLP/GHS specify the correct handling of chemicals

Since 1 June 2015, lubricants have had to be labelled in line with the CLP regulation (CLP – Classification, Labelling and Packaging). This grading system is the European implementation of the “Globally Harmonized System” (GHS) for the labelling of lubricants. It is meant to ensure consistent handling of dangerous substances and mixtures worldwide.

All our Safety Data Sheets for the European market comply with the increasing requirements of REACH and CLP regulations. Users outside of the European Union receive Safety Data Sheets corresponding to the GHS standard of their own country.

This ensures you always receive up-to-date information for the designated, safe use of our speciality lubricants.
